

Docket No. AT9-98-709

25 **CLAIMS:**

What is claimed is:

- sub-b17
- 30 1. A method for configuring a server in a distributed data processing system, the method comprising the computer-implemented steps of:
 registering a primary server name for the server;
 registering a secondary server name for the server; and
 responding to requests directed to either the primary server name or the
 35 secondary server name.
2. The method of claim 1 further comprising registering the primary server name
 or the secondary server name while configuring or initializing the server.
- 40 3. The method of claim 1 further comprising reading the primary server name or
 the secondary server name from a configuration file or initialization file.
- 45 4. The method of claim 1 wherein the distributed data processing system
 comprises a network, and wherein the requests are received from the network.
- 50 5. The method of claim 1 further comprising registering the primary server name
 or the secondary server name with a call to a NetBIOS application programming
 interface.
- 55 6. The method of claim 1 wherein the server comprises a plurality of secondary
 server names.
- sub-b2)
- 61 7. A method for reconfiguring servers in a distributed data processing system,
 the method comprising the computer-implemented steps of:
 registering a first primary server name for a first server;
 registering a second primary server name for a second server;
 determining that the first server requires reconfiguration;
 registering for the first server a secondary server name that is identical to the
 second primary server name; and

Docket No. AT9-98-709

responding by the first server to requests directed to either the first primary server name or the secondary server name.

3

8. The method of claim 7 wherein the first server is reconfigured in response to a determination that the second server requires fail-over support by the first server.

9. A method for reconfiguring servers in a distributed data processing system, the method comprising the computer-implemented steps of:
 registering a first primary server name for a first server;
 registering a secondary server name for the first server;
 responding to requests directed to either the first primary server name or the secondary server name;
 determining that the first server requires reconfiguration;
 deregistering the secondary server name for the first server; and
 registering for a second server a second primary server name that is identical to the secondary server name.

20

25

10. The method of claim 9 wherein the secondary server name is deregistered prior to connecting the second server to a network in the distributed data processing system.

30

11. The method of claim 9 wherein the second primary server name is registered prior to connecting the second server to a network in the distributed data processing system.

12. A data processing system comprising:
 registering means for registering a primary server name for a server and for registering a secondary server name for the server; and
 responding means for responding to requests directed to either the primary server name or the secondary server name.

40

13. The data processing system of claim 12 further comprising registering the primary server name or the secondary server name while configuring or initializing the server.

45

14. The data processing system of claim 12 further comprising a configuration file or initialization file for storing the primary server name or the secondary server name.

Docket No. AT9-98-709

15. The data processing system of claim 12 wherein the data processing system is connected to a network, and wherein the requests are received from the network.

5

16. The data processing system of claim 12 further comprising registering the primary server name or the secondary server name with a call to a NetBIOS application programming interface.

10

17. The data processing system of claim 12 wherein the server comprises a plurality of secondary server names.

15

18. A computer program product on a computer readable medium for use in a data processing system, the computer program product comprising:

instructions for registering a primary server name for a server and a secondary server name for the server; and

instructions for responding to requests directed to either the primary server name or the secondary server name.

20

19. The computer program product of claim 18 further comprising registering the primary server name or the secondary server name while configuring or initializing the server.

25

20. The computer program product of claim 18 further comprising reading the primary server name or the secondary server name from a configuration file or initialization file.

30

21. The computer program product of claim 18 wherein the data processing system is connected to a network, and wherein the requests are received from the network.

35

22. The computer program product of claim 18 further comprising registering the primary server name or the secondary server name with a call to a NetBIOS application programming interface.

40

23. The computer program product of claim 18 wherein the server comprises a plurality of secondary server names.
